

KNOW YOUR TUMOR[®]

Powerful Knowledge. Personalized Treatment.[®]

PANCREATIC
CANCER
ACTION
NETWORK[®]

Every pancreatic cancer patient is different. Patients who receive treatment based on their biology can live longer. The Pancreatic Cancer Action Network strongly recommends all pancreatic cancer patients get genetic testing for inherited mutations as soon as possible after diagnosis and biomarker testing of their tumor tissue to help determine the best treatment options. Patients should discuss both tests with their care team. The tests can be available through their treating institution or PanCAN's Know Your Tumor[®] precision medicine service.

Our Know Your Tumor precision medicine service, provided in partnership with Tempus, provides eligible pancreatic cancer patients and their oncologists with information about your biology, giving you and your healthcare team access to information about treatments – including available clinical trials – that are personalized to you.

A PERSONAL APPROACH TO TREATMENT OPTIONS

Precision medicine is treatment based on the individual patient's biology. PanCAN's Know Your Tumor precision medicine service uses two types of testing – genetic testing for inherited mutations and biomarker testing of your tumor tissue – to look for mutations. It is important to consider this information because a treatment that works well for one person may not work as well for someone else. Knowing the mutations in your tumor and the mutations you were born with may help you and your healthcare team select treatment options, including clinical trials, that are likely to work best for you and may not have been considered otherwise. Know Your Tumor reports provide valuable insight to help support the treatment decisions you make with your healthcare team.

CONTRIBUTE TO RESEARCH

Help accelerate pancreatic cancer research by joining our Patient Registry at pancan.org/patientregistry. The Patient Registry is a global online database created to look for patterns in treatments, side effect management and diagnostics. By sharing your experiences, as well as your Know Your Tumor report, you're giving researchers access to crucial data to dive into, helping them make discoveries that will improve treatment options and patient outcomes. The more information we share with researchers, the more data they will have to make new discoveries.

For more information about Know Your Tumor or to enroll, contact Patient Central.
